

## Knowing is Peace Of Mind

In caring for those afflicted by Alzheimer's, dementia, Autism or other memory cognitive disorders, it is imperative to know if they have wandered outside or away from you.

BLE SmartSole provides a low cost and convenient indoor monitoring solution. This *smart*, wearable technology is equipped with sensors that will report when the wearer enters or leaves a room or building.

### Features

- **Simple & easy set up - plug in the Bluetooth & Wi-Fi CUBE**
- **Set your range to monitor a wearer in a Room, House or Building**
- **SmartSole battery life lasts over a year**
- **Email / text notifications can be sent to multiple caregivers**
- **Comfortable, ergonomic insoles fit most shoes, sizes 3-14**
- **Water resistant**
- **Anti-friction fabric wicks moisture away from the foot**

### How the BLE SmartSole works

- The BLE SmartSole is a comfortable, ergonomic insole embedded with a miniaturized Bluetooth Low Energy chip that reports when the wearer crosses a virtual perimeter.
- The BLE SmartSole reports to a CUBE gateway sensor, which utilizes a Wi-Fi connection to send email or text alerts to your internet connected computer, tablet or smart phone. *Monthly service fee applies.*
- Simply plug in the CUBE gateway to a standard power outlet (110V & 220V) and set the perimeter range. The CUBE offers either 3 Directional or One Omni Directional antenna configurations to better suit your space.
- The BLE SmartSoles look and feel like regular insoles, free from the stigma of "lock on" bracelets. They can be placed in most shoes and may be trimmed for fit.
- The BLE SmartSoles come with a battery life of over a year, no need to worry about recharging or replacing batteries.
- Download the free Smart Locator mobile app and you will be able to see when the wearer passes in and out of the monitored area.
